

DUCT SYSTEM OPTIMIZATION & RESIDENTIAL SYSTEM BALANCING

Join us for a valuable 3-day training course!

It's a known fact that typical air distribution systems across North America lose, on average, 43% of an HVAC system's efficiency. Your customers don't have to live with these substandard systems. Now you can offer them real solutions! Learn how to test and improve poorly performing HVAC systems and provide your customers with the very best comfort and energy efficiency.

Light years ahead of your competition!

By taking this class and passing the exam, you will earn the **Duct System Optimization Specialist certification**. This is the **only certification of its kind!!**

You'll also be eligible for NATE, BPI and State continuing education credit hours.
